CopyCat - 18k+ users

Philadelphia, PA

Co-founder - COO & CAIO

Jan 2021 - Jun 2023

Convert your Figma designs to React.js code in 30 seconds using AI (Github Co-pilot but for converting designs to code)

Product Strategy & Go-to-market

- Charted a **roadmap** and led the product team in the development of our **core technology** - the **code generation** engine.
- Architected & co-engineered **distributed training**, AI deployment, **feature store**, and **data versioning** infrastructure. As a result, boosted experimentation rate by **4-6x**, reduced training cost by **50%**, optimized multi-model inference pipeline time < 2s & sped up embedding similarity inference **13.4x**.
- Created & delegated the implementation of data-oriented **CI/CD** pipelines that ensured integration, regression, and model drift errors were caught early or pre-release.
- Championed & implemented **data flywheel** to obtain user & public React.js code & Figma designs. Additionally, prototyped & coordinated the implementation of a **gamified UI/UX** to obtain user corrections for AI model predictions.
- Spearheaded SMB pilot sales and created a **sales playbook** and CRM process. Leading to 4 successful pilots ACV \$5k.

Leadership

- Trained leadership team by introducing **customer validation** processes, **dogfooding**, **decision-making tools**, hypothesis-driven experimentation and AI-best practices. Thus lowering team execution friction and enabling the growth of the Product Market Fit score from **0 to 15% in 3 months**.
- Reduced **sprint** delays from a 5-day to 1-day average by introducing **SCRUM** and **probabilistic planning** processes.
- Created & improved the **hiring & onboarding** process to curate a team of 12 consisting of engineers, technical writers, marketers, and team leads.
- Supported the Head of Marketing in the **GTM** process by curating blog articles. Reaching **50k+ hits/month** and **ranking #9** for the keyword 'CopyCat' on Google globally.
- **Mentored** 2 ML Interns to full-time ML Engineers.

Product Management and Development

- Increased weekly **user retention** by **7%** by integrating AI models into the code generation process. Trained **object detection**, **image captioning**, and **reinforcement learning-based** layout generation models with the constraint of small tagged datasets.
- Guided the ML team on research direction & integration of the **image similarity**, **OpenAI's GPT3+4** based automated code transformation and **image classification** models where tagged data was expensive to obtain.
- Lowered cost of **data tagging** by **45%** through a data filtering & tagging pipeline with an image yield of **70%** that used heuristics & AI models to surface the most valuable images to send to data taggers.

Orai, Inc. - 500k+ users

Philadelphia, PA

Intern → Product Manager → Co-founder & COO

Nov 2016 - Dec 2020

An AI-powered speech coaching app to make you a more confident speaker (Think Duolingo but for Public Speaking)

Product Strategy & Go-to-market

- Boosted completion rates of the 9 exercises in a row from **0 to 60%** (30+ iterations in 1.5 Months), resulting in a **weekly user retention** increase of **10%** by introducing **real-time** feedback, interactive lessons, and **gamification**. Identified by creating the **user journey** from various data sources & focusing on analyzing user recordings (1k+) for **usage fatigue**.
- Introduced the **Agile** methodology with **Jira** to increase team accountability, better road mapping, and development predictability with a distributed team. Reduced sprint delays from an average delay of **1 week down to 1 day**.
- Created & maintained a data-enriched user journey-based **roadmap** that allowed Orai to reach **13.9% user payment rate** & **revenue growth** of **\$1k MRR to \$20k MRR** signifying **Product-Market-Sales fit**.
- Performed **user segmentation** to raise paid user signups from 30/month to 160/month through organic marketing. Ranked **#1 in the education category** on the Google & Apple app stores and reached **200k+ hits/month** on the Orai website.
- Systematized & maintained the analytics stack by identifying a viable mobile analytics platform & migrating from an in-house full-stack web app for KPI monitoring to an industry-standard **SQL** based **Business Intelligence** software; enabling a reduction in time to discover new data insights by **12x** (3 hr to 15 mins).
- Oversaw Orai's **rebrand** after distilling feedback from 100+ startup mentors during the **Techstars** program. Collaborated with the head of design to **simplify UX** & introduce a mascot to increase audience engagement with content.

Leadership

- **Fundraised \$2.3M dollars** on an over-committed round of \$3.5M from top-tier VC firms and Angels such as **Menlo VC**, **Comcast Ventures**, **Techstars** (<1% investment rate), Nancy Duarte (makes all of Apple's Keynotes) and BDML.

Continued on the back

- Grew team from 3 (founders) to 21 across product, sales, marketing, and design teams. Drafted contracts, **NDAs**, and negotiated compensation.
- Resolved conflicts between teams due to rapid scaling by introducing various management & communication practices as well as intervening in situations where issues arose.
- Handled **finances**, **legal compliance**, contract drafting, **user agreements**, creation of internal company policies, acquiring in-kind benefits (**\$500K**), and setting up employee benefits for the company.
- Supported enterprise **SaaS sales** by preparing customized **demos** and whitepapers for 50+ C-suite level sales meetings in 6 months (10M deal flow), leading to deals with **IBM**, **Comcast**, **HPE**, **Intel**, **Nike**, and more (\$100k ACV and \$800k/ARR).

Product Management and Development

- Increased **session time by 30%** & boosted weekly **user retention** by **18%**, by building AI models that included but were not limited to a **Smile detector**, Pause Classifier, Punctuator, **Gaze Detector**, Filler Detector, **Speaker Separator**, and a **Natural Language Generation Engine**.
- Designed a new results screen based on the **Natural Language Generation model**, boosting weekly user retention by 7%.
- Increased the reliability of the **audio streaming** system from **60% to 99.9%** by performing **error analysis**, overseeing **GraphQL+WebRTC** migration, and assisting with design and engineering blockers.
- Consistently conducted **user interviews** (100+) for 4 product platforms using the “Mom Test” methodology to increase the reliability of information from user interviews & **save 100s of hours** of potentially lost time.

INVOLVEMENTS & ACHIEVEMENTS
